ADITI REKHI

FULL STACK SOFTWARE ENGINEER | ANGULAR • REACT • PYTHON / FASTAPI

+91 98188 03696 | aditirekhi1999@gmail.com | linkedin.com/in/aditi-rekhi | github.com/aditirekhi

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 5+ years in software development, building enterprise web applications across analytics and fintech. Experienced in Angular, React, TypeScript, Python/FastAPI, REST APIs, microservices and SQL databases; delivers data-intensive interfaces, production services and automation in Agile teams using Azure and AWS.

TECHNICAL SKILLS

Frontend: Angular, React.js, TypeScript, JavaScript, RxJS, NgRx, HTML5, CSS3, Tailwind CSS, Bootstrap, PrimeNG, Highcharts, Wijmo, Web Workers
Backend & Data: Python, FastAPI, REST APIs, WebSockets, .NET Core, Microservices, OAuth2/JWT, PostgreSQL, MySQL, Redis, SQLAlchemy/SQLModel, Alembic, SQL
Cloud, Quality & Tools: Azure, AWS (EC2, RDS), Databricks, CI/CD, Git, GitHub, Bitbucket, JIRA, Confluence, Postman, Jasmine, Karma, Unit Testing, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Engineer | Fractal Analytics **Nov 2025 – Present**
• Redesigned data-intensive dashboards with Web Workers and RxJS BehaviorSubjects to process large Excel datasets asynchronously, minimizing main-thread blocking and improving UI responsiveness.
• Implemented WebSocket communication for an agentic client application, supporting real-time user interaction and message exchange with a live interactive agent.
• Designed and deployed scalable Python/FastAPI REST APIs for enterprise data workflows, contributing to service design, integration and deployment across the software development lifecycle.
• Developed a proof-of-concept enterprise platform integrating analytics dashboards, chatbot assistance, collaborative document editing with inline change highlights and multi-stage file approvals.
• Migrated an existing application frontend from Angular to React, adapting component implementation while retaining application functionality and user workflows.
• Managed parallel frontend, backend and platform deliverables using Azure, Databricks, JIRA and Secret Server; earned FastAPI certification and applied it to backend services.

Senior Software Engineer | Coforge **Feb 2023 – Nov 2025**
• Developed scalable Angular applications and data dashboards with Wijmo and Highcharts, implementing reusable components and maintainable UI patterns for complex business workflows.
• Wrote and maintained Karma/Jasmine unit tests for UI components, helping reduce production issues by 15% and improve application stability.
• Improved frontend loading behavior and dashboard responsiveness while optimizing .NET Core microservices and MySQL queries for more efficient API and data access.
• Built Python ETL scripts with openpyxl and mysql-connector to move Excel data into MySQL, reducing monthly manual processing time by 10% and limiting data-entry errors.
• Contributed to Agile sprint planning, debugging, code reviews and delivery coordination through Bitbucket, JIRA and Confluence, helping accelerate issue resolution by 10%.

Senior Operations Executive | Infosys **Dec 2020 – Jan 2023**
• Administered and supported AWS infrastructure, Amazon RDS, Active Directory and ServiceNow operations, improving system reliability and reducing downtime by 20%.
• Coordinated incident triage, troubleshooting and cross-team escalation to resolve production issues, reducing ticket resolution time by 15%.
• Assisted with deployments, infrastructure troubleshooting and operational checks to support stable enterprise environments and reduce service interruptions.
• Standardized repeatable backup and support procedures, contributing to a 25% reduction in service disruptions and improving operational consistency.

SELECTED PROJECTS

Caseira | Recipe-Based Meal Kit & Grocery Delivery Platform (In Development)
• Built a modular Angular application for authentication, recipe discovery, regional cuisines, meal kits, shopping cart and accounts, using NgRx for application state management.
• Implemented route guards and HTTP interceptors for protected navigation and authenticated API requests, connecting frontend features to FastAPI services.
• Developed Python/FastAPI REST endpoints for users, recipes, categories, regions, carts and reviews, with OAuth2/JWT authentication and a Redis-backed token blacklist for logout and revocation.
• Modeled PostgreSQL relationships for recipes, ingredients, carts and orders using asynchronous SQLAlchemy/SQLModel and versioned schema changes through 15+ Alembic migrations.

SDforgmac | Official Company Website
• Designed and built the company's official public-facing website using React.js and Tailwind CSS, translating business content into a structured web interface.
• Developed page layouts and reusable styles to present the company and its industrial offerings with consistent navigation and visual hierarchy.
• Integrated EmailJS for website inquiry submissions, enabling the business to receive email notifications when prospective customers get in touch.
• Maintained the React project in a GitHub repository and published a live, accessible website through GitHub Pages.
